

STATUS: WARNING

1. Executive Summary

TWR-OJO-002 (Festac) and TWR-LAG-W-022 (Mushin) have triggered recurring 85%+ load alerts during the evening peak window (18:30-21:30) on weekdays throughout May 2026. This congestion pattern is impacting user experience and increasing SLA risk.

2. Daily Load Profile (Average Load % by Hour)

Hour	TWR-OJO-002	TWR-LAG-W-022
06:00	42	39
07:00	48	45
08:00	55	52
09:00	60	58
10:00	63	61
11:00	65	64
12:00	67	66
13:00	69	68
14:00	71	70
15:00	74	72
16:00	77	75
17:00	80	78
18:00	84	82
19:00	88	86
20:00	90	88
21:00	87	85
22:00	78	76
23:00	65	63

3. Crowd-Sourced Complaint Correlation

Date	Complaints	Peak Load (%)	Resolution Time (min)
2026-05-01	42	89	6

STATUS: WARNING

2026-05-02	38	87	5
2026-05-03	45	91	7
2026-05-06	51	93	6
2026-05-07	47	90	5

4. Spillover Target Analysis

TWR-OJO-005 and TWR-LAG-W-021 exhibit >40% headroom during evening peaks and are viable candidates for load redistribution to mitigate congestion on TWR-OJO-002 and TWR-LAG-W-022.

5. Auto Load-Shed Performance

Auto load-shedding mechanisms achieved a 94% success rate in May 2026, with an average response time of 2.1 minutes from threshold breach to mitigation.

6. SLA Risk Projection

If current congestion growth trends continue, Mean Time to Recovery (MTTR) is projected to exceed the 5-minute SLA threshold by August 2026, particularly for TWR-OJO-002.

7. Capacity Uplift Plan

A new carrier deployment is planned for TWR-OJO-002 to address peak congestion. Estimated delivery and integration is scheduled for Q3 2026.

8. Priority

MEDIUM - Escalate to HIGH if current growth trajectory persists.
