

Management Escalation Report - Lagos West Cluster Multi-Tower Degradation

Document Code: ESC-LAGW-20260501

Raised by: Adaeze Nwosu (NOC Analyst)

Directed to: Regional Network Director

Date: May 1, 2026

Priority: HIGH

1. Reason for Escalation

All three Lagos West towers (Surulere, Mushin, Yaba North) simultaneously degraded during monitoring. The cluster is at risk of collapse if corrective measures are not taken urgently.

2. Current Status

Tower	Status	Signal %	Load %	Active Issue
TWR-LAG-W-014	CRITICAL	32%	94%	Backhaul fiber degradation
TWR-LAG-W-022	WARN	58%	81%	Elevated packet loss, microwave jitter
TWR-LAG-W-031	WARN	64%	74%	Thermal cooling fan failure (repaired May 1)

3. Business Impact

The Lagos West cluster serves an estimated 55,000 subscribers. SLA compliance is at risk if any tower goes offline. Service degradation could lead to significant customer dissatisfaction and potential financial penalties.

4. Actions Already Taken by NOC Team

- Immediate rerouting of traffic through alternate microwave paths.
- Field team dispatched to Yaba North for cooling fan replacement (completed May 1).
- Packet loss monitoring thresholds adjusted to reduce false alarms.
- Temporary load balancing applied across Ikeja cluster to absorb excess traffic.

Management Escalation Report - Lagos West Cluster Multi-Tower Degradation

5. Management Decision/Resource Needed

- a. Approval for emergency IKEDC sector 7 escalation - requires Director-level contact.
- b. Budget approval for junction LJ-12 fiber protection works - estimated NGN 4.2M.
- c. Field team overtime approval - weekend standby coverage to mitigate further risks.

6. Options and Consequences

Action Item	If Taken	If Not Taken
IKEDC escalation	Faster restoration of stable grid supply	Continued instability, higher generator reliance
Fiber protection works	Prevents repeat fiber degradation	Risk of recurring outages, SLA breach
Overtime approval	Ensures rapid response over weekend	Delayed interventions, possible tower downtime

7. Timeline

Recommended decision point: May 2, 2026 (12:00 WAT) to allow weekend coverage and fiber protection scheduling.

8. NOC Analyst Recommendation

Immediate approval of all three items is strongly advised to prevent cluster collapse and ensure SLA compliance.

9. Sign-off
